**Privacy / AVG:**

For more information about the privacy regulation (AVG in Dutch, GDPR in English), please see our website: [www.sanquin.org](http://www.sanquin.org).

**Use of residual material for research**

We may use residual, anonymized, patient material to optimize diagnostic tests to the benefit of patients. This can include validation, equipment calibration or scientific research. Sanquin implicitly assumes that the patient does not object to this use when receiving material for diagnostic testing.

According to the stringent Dutch Law, the health care professional is responsible for assuring that the patient agrees to the above (as mentioned in the 'no-objection clauses' in the Dutch law referred to as WGBO, Medical Treatment Contracts Act) and to inform us **immediately** of any objections before or after the material has been sent to Sanquin. Please, contact the management of Sanquin Diagnostic Services if your patient objects to this use of the material, or if you think that your patient could object; phone +31 20 5123479 or e-mail [diagnostic.services@sanquin.nl](mailto:diagnostic.services@sanquin.nl)
